

## ■ Arrays

Mitsiu Alejandro Carreño  
Sarabia

## Agenda

- Concepts
- Data types
- Arrays
- Magic Words?
- Intro P00
  - Scenario
  - Object oriented solution
  - Classes

### Programming paradigm

1. A high level model to conceptualize and structure a computer program implementation

### Implementation

■ The process of moving an idea from concept to reality

## Data types

### Primitives

- byte = 0
- short = 0
- int = 0
- long = 0L
- float = 0.0f
- double = 0.0d
- boolean = false
- char = '\u0000'
- \*String = null

### Arrays

<type>[] <nombreVar> = new <type>[<size>]

```
1 // Declares an array of integers
2 int[] myArray;
3
4 // allocates memory for 10 integers
5 myArray = new int[10];
```

## Arrays

---

### Arrays

```
<type>[] <nombreVar> = new <type>[<size>];
```

```
1 // Declares an array of integers
2 int[] myArray;
3
4 // allocates memory for 10 integers
5 myArray = new int[10];
```

When do we use **new**?

**new**

A Java keyword used to create an instance of a class.

## Arrays

---

How can we create an array to store everybody name's?

```
1 int[] myArray = new int[10];  
2  
3 myArray[0] = 3;  
4  
5 System.out.print("El primer integer en el arreglo es: "  
  + myArray[0]);
```

## Magic words?

---

What does the keywords in function main mean?

```
1 class Demo {  
2     public static void main(String[] args){  
3         ...  
4     }  
5 }
```
